MEMORANDUM

Date: FEBRUARY 17, 1994
TO: EPA Region VI
Information Management Division
1445 Ross Avenue
Dallas, TX 75202

FROM: Facility Name: WEYERHAEUSER PAPER COMPANY
Current Mailing Address: P.O. Box 890
City, State, ZIP: VALLIANT, OK 74764-0890
Location Address: HIGHWAY 70 WEST
City, State, ZIP: VALLIANT, OK 74764
Phone number: 405-933-1493

EPA ID number: OKD 056362601

Please update our EPA notifiers information to reflect the current hazardous waste activity for this facility.

- ☐ LQG (≥ 2200 lbs/month)
- ☒ SQG (≥ 220 lbs/month and < 2200 lbs/month)
- ☐ CLG (< 220 lbs/month)
- ☐ No longer generate hazardous waste, still in business
- ☐ No longer generate hazardous waste, out of business
- ☐ Facility should NOT be identified as treatment, storage, disposal facility

RE: Release Report #110-777

Dear Mr. Wynne:

Enclosed is a copy of the written report for the March 17, 1992, verbal release reported from the Weyerhaeuser Valliant facility. As described in the attached report, there are no expected impacts to human health or the environment outside the facility.

If you have any questions or need additional information, please feel free to call me at 405/933-1269.

Very truly yours,

Mike Citty

WRITTEN REPORT OF REPORTABLE RELEASE
DATE OF RELEASE MARCH 17, 1992
NOTIFICATION REPORT #110-777

This is a follow up written report for the verbal report made to the National Response Center and the Oklahoma Department of Pollution Control made March 17, 1992 by Mr. J.E. "Mick" McCourt.

The release was of an USEPA RCRA D002 liquid with a pH of approximately 13. The period of the release was from March 12, 1992 through noon of March 16, 1992. The release was immediately terminated upon discovery by Mr. McCourt. The release occurred in the recausticizing area near the dregs washer at the above facility location. No extremely hazardous substances were released. The release was not a hazardous waste from a specific or nonspecific source as defined by USEPA or the State of Oklahoma. Previous testing of this material had demonstrated it did not exhibit hazardous waste characteristics as measured by Extraction Procedure (EP) analysis.

An estimated 80 tons of material was released during this period but it is not known if the pH exceeded 12.5 during the entire period. The material was a residual from the recausticizing process at the facility and was caused by incomplete recovery of the caustic materials. The material was primarily lime residuals and contained a small amount of sodium hydroxide.

The release was to an unlined earthen ditch used to convey nonhazardous wastewaters to the facility's wastewater treatment system. The unlined portion of this ditch was less than 150 feet in length. The materials released were neutralized in the wastewater treatment system prior to discharge as permitted by the facility's NPDES and State discharge permits. The release caused no adverse impacts on the wastewater treatment system and no exceedances of permitted discharge limits occurred.

It is estimated that only a small amount of material might have seeped into the soils of the ditch during the release. The reason is that the soils were saturated with moisture due to the other waters flowing through the ditch and the caustic materials were neutralized by those other wastewaters flowing through the ditch. No adverse health effects to employees or the public have been observed or are expected as a result of this release nor is there likely to be any environmental impact to air, soils or surface / ground waters.

Written Release Report

Report # 110-777

Weyerhaeuser Company
Valliant, Oklahoma

After stopping the release, the ditch was cleaned of sediments. The pH of the sediments and ditch soils remaining was below 12.5 by March 18, 1992. The discharge piping system was modified to prevent a repeat of this release. The material causing the release was rerouted to an elementary neutralization system where they are being neutralized in accordance with regulations. The clean-up materials were also managed in an elementary neutralization system.

Plans are in place to improve the process giving rise to the material released which will reduce the potential for future releases. Training was given to the appropriate employees to improve their understanding of the requirements of the regulations and the incident being reported herein.

There were no injuries as a result of the release.

The release was reported to Petty Officer Craft by Mr. McCourt at the National Response Center.

Mr. John Martin of U.S. Environmental Protection Agency's Emergency Response Team followed up by telephone on March 17, 1992.

The release was reported to the Oklahoma Spill Report Hotline on March 17, 1992. Mr. McCourt spoke with Mr. Mike Smith with regard to the incident.

The release was also reported to the Oklahoma Department of Health, Division of Solid Waste on March 17, 1992. Mr. R. Fenton Rood of the Division of Solid Waste was contacted by Weyerhaeuser's Environmental Affairs Manager, Mr. Jess Walrath. This report is being submitted to all agencies notified verbally.
